

WHAT IS CLAIMED IS:

1. A replaceable multiple-functional interface card for inserting into an inserting seat of an electronic device; the inserting seat being extended with a rotary seat; and one side of the rotary set being installed with an inserting
5 hole; the replaceable multiple-functional interface card comprising

an interface card;

a receptacle extended from one end of an interface card;

a plug extended from one side of the receptacle; the plug being wound by three insulating wires; the three insulating wires dividing the plug into
10 four surfaces;

wherein when the plug is inserted into the inserting hole, data in the interface card is transferred between the inserting seat and the interface card through the four surfaces.

2. The replaceable multiple-functional interface card as claimed in
15 claim 1, wherein the plug is replaceable so as to replace interface card.

3. The replaceable multiple-functional interface card as claimed in claim 1, wherein the inserting seat is the inserting seat of a GPS satellite signal receiver.

4. The replaceable multiple-functional interface card as claimed in
20 claim 1, wherein the inserting seat is the inserting seat of a blue tooth device.

5. The replaceable multiple-functional interface card as claimed in claim 1, wherein the inserting seat is the inserting seat of a digital camera.

6. The replaceable multiple-functional interface card as claimed in
25 claim 1, wherein two of the surfaces are contact surfaces for positive and negative electrodes, respectively.

7. The replaceable multiple-functional interface card as claimed in claim 1, wherein two of the surfaces are used to receive and transmit signals, respectively.
